

TIPS TO ENHANCE YOUR SUCCESS!

Create the first impression of your facility.

How your facility looks is a first impression a new potential member has when they first step into your facility, make it the best.

Tall machine in back of facility

Opens up facility, can see over equipment, customers visible visually appealing, welcoming, spacious...

Placement and Traffic flow

Create a welcoming and function traffic flow by placing your equipment in correct locations and the right sequence.

Maximize your space

A professional layout can save you time and money by knowing exactly where your layout, space, availability, along with the exact look of your facility before it opens.

WOW Factor

The personal viewing screens create a WOW factor and a great selling tool for new members.

South, West and East windows

Not always the best location to have your cardio equipment face due to the sun, glare and the possibilities of a headache after a workout.

FACILITY LAYOUT RECOMMENDATIONS

Facility information based on the square footage size of facility

- **Optional Child Care:** 200 -300 sq. ft for 10,000-12,000 sq. ft layout. 400-500 sq. ft for 13,000 – 17,000 sq. ft layout.
- **Aerobics Floor:** 800-1000 sq. ft for 10,000-12,000 sq. ft layout. 1,500 plus for 13,000-17,000 sq. ft layout.
- **2-3 Sales Desks:** Divider or privacy wall between desks, open on one end, no door.
- **Locker Rooms:** Do not over build, 2 showers, 2 sinks, and 2 toilets in a 10,000-12,000 sq. ft layout. 3 showers, 3 sinks and 3 toilets anything above 13,000 sq. ft.
- **Put in a Single:** Or multiple cardio rows facing out towards the exercise floor.
- **Future Equipment:** A little extra space is a plus when additional equipment is added you are giving back to the members as a way of showing appreciation.
- **No Offices:** computer equipment is locked up in the desk, all facilities will have a front desk.
- **Entertainment:** Large screen smart TVs via TV mount from ceiling have at 5 to 10 based on amount of cardio space

Unit Specifications

HEX II

- 46 low pressure Smart lamps, 10-minute maximum tanning session
- Requires a 60-amp double pole breaker, actual draw is 45 amps, inrush is 2300 amps for one millisecond
- 208/240 volts – single phase – 120 volts per leg
- There are 4 wires consisting of 2 hot, a neutral and a ground.
- With a TMAX timer, you will need a 110-v outlet at the front desk. You will need 2 18-gauge wires to run from the TMAX timer J-3 terminal to the electrical panel of the HEX system where it's marked J-3 terminal.
- HEX is U.L. listed (48N5) which means it must be hard wired. The wire can come from the floor, ceiling or wall and will go directly into our electrical control panel on the left side of the HEX unit as you face it.
- Each HEX comes with as much timer cord as needed to surface mount the HEX timer at the main service area.
- An odometer (hour meter) is mounted on the electrical control panel of the HEX that tracks lamp usage to the 10th of an hour.
- Two Jensen 90-watt speakers are installed in the ceiling of the HEX tanning unit; they can be connected to your stereo receiver.
- Over 150 available finishes (Wilson Art and Formica laminates).
- The fan on the top of the unit operates at 2900 CFM
- The HEX is self-ventilating; cool air is drawn in through vents at the bottom of each wall and hot air is forced out the top of the unit via the fan.
- 24,000 BTU's per hour if the unit is running continually.

HEX DIMENSIONS

HEX tanning measurements:

4'x4' (tanning unit) 50" peak to peak with the unit roof

4'x7' (tanning unit with attached dressing room)

Height: 7'3"

CARDIO ELECTRICAL NEEDS:

Treadmills – 1 per 20-amp circuit

Elliptical – 12 per 20-amp circuit

Bike – 12 per 20-amp circuit

Stair climber – 12 per 20-amp circuit

1 coax cable run for every 10 tv's. (Ideally each run should go directly to the box to avoid signal loss)

AIR NEEDS:

1 ton needed for every 250 sq. ft.

IMPORTANT CARDIO SPACING INFO

* SPACING—The below minimum spacing recommendations are based on a combination of the ASTM (U.S.) voluntary standards and EN (European) regulations as of October 1, 2012, for access, passage, passageway, and emergency dismount:

* Treadmills—a minimum of 0.5 m (19.7 in.) on each side of the treadmill and 2 m (78 in.) behind the machine.

* Cardio equipment other than treadmills—a minimum of 0.5 m (19.7 in.) on at least one side, and 0.5 m (19.7 in.) behind or in front of the machine.

* Careful consideration should be given to the requirements of the Americans with Disabilities Act (ADA), US Code 28 CFR (see Section 305). ASTM standards are voluntary and may not reflect current industry standards. The actual area for access, passage, and emergency dismount is the responsibility of the facility. The facility should consider the total space requirements for training on each unit, voluntary and industry standards, and any local, state, and federal regulations. Standards and regulations are subject to change at any time.
